

lung cancer part i pdf

Lung cancer, also known as lung carcinoma, is a malignant lung tumor characterized by uncontrolled cell growth in tissues of the lung. This growth can spread beyond the lung by the process of metastasis into nearby tissue or other parts of the body. Most cancers that start in the lung, known as primary lung cancers, are carcinomas. The two main types are small-cell lung carcinoma (SCLC) and ...

Lung cancer - Wikipedia

Evaluation. A chest X-ray is the first step in evaluating lung cancer. Normal X-ray procedures give a good picture of the chest cavity, but a CT scan (an advanced X-ray system) is usually done to show the lung mass, lymph nodes and the rest of the chest cavity in much greater detail. These X-rays may help evaluate the extent of a lung mass and suggest the likelihood of cancer.

Lung Cancer Symptoms & Stages at Cedars-Sinai Cancer Institute

What is lung cancer? Lung cancer starts when abnormal cells grow and multiply in an uncontrolled way. Lung cancer is the leading cause of cancer death and the fifth most common cancer diagnosed in Australia 1.. It is responsible for almost one in five cancer deaths in Australia.

Lung cancer - Cancer Council Australia

Find current treatment regimens for lung cancer, including options such as pemetrexed, pemetrexed + cisplatin, and vinorelbine.

Lung Cancer Treatment Regimens - Cancer Therapy Advisor

Lung cancer is treated in several ways, depending on the type of lung cancer and how far it has spread. People with non-small cell lung cancer can be treated with surgery, chemotherapy, radiation therapy, targeted therapy, or a combination of these treatments. People with small cell lung cancer are usually treated with radiation therapy and chemotherapy.

CDC - How Is Lung Cancer Diagnosed and Treated?

The advent of computed tomography screening for lung cancer will increase the incidence of ground-glass opacity (GGO) nodules detected and referred for diagnostic evaluation and management.

Ground-Glass Opacity Lung Nodules in the Era of Lung

Small cell lung cancer (SCLC), previously known as oat cell carcinoma, is considered distinct from other lung cancers, which are called non-“small cell lung cancers (NSCLCs) because of their clinical and biologic characteristics.

Small Cell Lung Cancer - Medscape Reference

While cancer may develop in one area of the body, it has the ability to spread to other areas. When cancer spreads in this way, it is said to have metastasized, and is known as metastatic cancer.

Health and Safety Executive The joint effect of asbestos exposure and smoking on the risk of lung cancer mortality for asbestos workers (1971-2005)

RR833 - The joint effect of asbestos exposure and smoking

The lungs are located in the chest on either side of the heart in the rib cage. They are conical in shape with a narrow rounded apex at the top, and a broad concave base that rests on the convex surface of the diaphragm. The apex of the lung extends into the root of the neck, reaching shortly above the level of the sternal end of the first rib. The lungs stretch from close to the backbone in the ...
