Artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and other animals. In computer science AI research is defined as the study of "intelligent agents": any device that perceives its environment and takes actions that maximize its chance of successfully achieving its goals.

Mathematical economics is the application of mathematical methods to represent theories and analyze problems in economics. By convention, these applied methods are beyond simple geometry, such as differential and integral calculus, difference and differential equations, matrix algebra, mathematical programming, and other computational methods. ...

Under review as a conference paper at ICLR 2017 If $P(r(x)) > P(g(x))$, then x is a point with higher probability of coming from the data than being a generated sample. This is the core of the phenomenon commonly described as "mode dropping": when there are large regions with high values of P
