Condensed matter physics is the field of physics that deals with the macroscopic and microscopic physical properties of matter. In particular it is concerned with the "condensed" phases that appear whenever the number of constituents in a system is extremely large and the interactions between the constituents are strong.

Dark matter is a hypothetical form of matter that is thought to account for approximately 85% of the matter in the universe, and about a quarter of its total energy density. The majority of dark matter is thought to be non-baryonic in nature, possibly being composed of some as-yet undiscovered subatomic particles. Its presence is implied in a variety of astrophysical observations, including ...

In nature, proteins are organized into highly ordered self-assembled structures with various morphologies and dimensions. In their Communication on page 10691 ff., Y. Ma, G. Chen, and co-workers report the fabrication of protein assemblies by using native protein LecA as a building block through sugar-protein interactions and rhodamine dimerization.
