The lac operon of the model bacterium *Escherichia coli* was the first operon to be discovered and provides a typical example of operon function. It consists of three adjacent structural genes, a promoter, a terminator, and an operator. The lac operon is regulated by several factors including the availability of glucose and lactose. It can be activated by allolactose.

Introduction. The advent of short-read sequencing machines gave rise to a new generation of assembly algorithms and software. This survey reviews algorithms for de novo whole-genome shotgun assembly from next-generation sequencing data. It describes and compares algorithms that have been presented in the scientific literature and implemented in software.
