Mammography (also called mastography) is the process of using low-energy X-rays (usually around 30 kVp) to examine the human breast for diagnosis and screening. The goal of mammography is the early detection of breast cancer, typically through detection of characteristic masses or microcalcifications.. As with all X-rays, mammograms use doses of ionizing radiation to create images.

Mammography - Wikipedia

Prophylactic mastectomy Breast cancer risk . Bilateral prophylactic mastectomy is the removal of both breasts to prevent breast cancer. Bilateral prophylactic mastectomy lowers the risk of breast cancer in women at high risk by at least 90 percent [202,297-300]. However, it doesn't completely protect a woman from breast cancer []. A mastectomy isn't able to remove all of a woman's breast tissue.
